## Definitions

## General

Product data applies under the following conditions:

- Three hours storage at ambient temperature followed by 30 minutes warm-up operation
- Specified environmental conditions met
- Recommended calibration interval adhered to
- All internal automatic adjustments performed, if applicable

## Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as $<, \leq,>, \geq, \pm$, or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

## Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

Typical data (typ.)
Characterizes product performance by means of representative information for the given parameter. When marked with <, > or as a range, it represents the performance met by approximately $80 \%$ of the instruments at production time. Otherwise, it represents the mean value.

## Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

## Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

## Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are indicated as follows: "parameter: value".
Typical data as well as nominal and measured values are not warranted by Rohde \& Schwarz.
In line with the 3GPP/3GPP2 standard, chip rates are specified in Mcps (million chips per second), whereas bit rates and symbol rates are specified in Mbps (million bits per second), kbps (thousand bits per second) or ksps (thousand symbols per second), and sample rates are specified in Msample/s (million samples per second). Mcps, kbps, ksps and Msample/s are not SI units.

## Specifications

Specifications apply under the following conditions:
15 minutes warm-up time at ambient temperature, specified environmental conditions met, calibration cycle adhered to. Data without tolerances: typical values only. Data designated as "nominal" applies to design parameters and is not tested. Data without tolerance limits is not binding.

## Service options

| Warranty |  |  |
| :---: | :---: | :---: |
| Base unit |  | 3 years |
| All other items ${ }^{10}$ |  | 1 year |
| Options |  |  |
| Extended Warranty, one year | R\&S ${ }^{\text {® }}$ WE1 | Please contact your local Rohde \& Schwarz sales office. |
| Extended Warranty, two years | R\&S ${ }^{\text {® }}$ WE2 |  |
| Extended Warranty with Calibration Coverage, one year | R\&S ${ }^{\circledR} \mathrm{CW} 1$ |  |
| Extended Warranty with Calibration Coverage, two years | R\&S ${ }^{\text {® }}$ CW2 |  |

Extended warranty with a term of one and two years (WE1 and WE2)
Repairs carried out during the contract term are free of charge ${ }^{11}$. Necessary calibration and adjustments carried out during repairs are also covered.

## Extended warranty with calibration coverage (CW1 and CW2)

Enhance your extended warranty by adding calibration coverage at a package price. This package ensures that your Rohde \& Schwarz product is regularly calibrated, inspected and maintained during the term of the contract. It includes all repairs ${ }^{11}$ and calibration at the recommended intervals as well as any calibration carried out during repairs or option upgrades.

## Service that adds value

 , Worldwide, Local and personalized , Customized and flexible , Uncompromising quality , Long-term dependability

## Rohde \& Schwarz

The Rohde \& Schwarz electronics group offers innovative solutions in the following business fields: test and measurement, broadcast and media, secure communications, cybersecurity, monitoring and network testing. Founded more than 80 years ago, the independent company which is headquartered in Munich, Germany, has an extensive sales and service network with locations in more than 70 countries.

[^0]:    1 Min. and max. detectable audio frequency and harmonics depend on the demodulation bandwidth and audio filter settings.
    2 Modulation frequency 1 kHz sine, AM modulation depth $50 \%$, carrier level 0 dBm , center frequency $=499 \mathrm{MHz}$, reference level 6 dBm , demodulation bandwidth $=20 \mathrm{kHz}, \mathrm{SNR}>60 \mathrm{~dB}$, audio filter = bypass.
    ${ }^{3}$ Modulation frequency 1 kHz sine, FM -deviation $=75 \mathrm{kHz}$, carrier level 0 dBm , center frequency $=499 \mathrm{MHz}$, reference level 6 dBm , demodulation $\mathrm{BW}=300 \mathrm{kHz}, \mathrm{SNR}>60 \mathrm{~dB}$, audio filter $=1 / 10$, deemphasis $=$ off.

[^1]:    5 Reference signal is generated with a Gauss filter, BT $=3$.
    ${ }^{6}$ ASK modulation index $50 \%$, symbol rate $=100 \mathrm{kHz}$, Gauss BT $=1.0$, modulation signal PSBS.
    7 FSK modulation deviation 100 kHz , symbol rate $=100 \mathrm{kHz}$, Gauss BT $=1.0$, modulation signal PRBS.
    9 Beta is the ratio of frequency deviation to symbol rate.

[^2]:    ${ }^{10}$ For options that are installed, the remaining base unit warranty applies if longer than 1 year. Exception: all batteries have a 1 year warranty.
    ${ }^{11}$ Excluding defects caused by incorrect operation or handling and force majeure. Wear-and-tear parts are not included.
